

# Portfolio

## Assignment 5

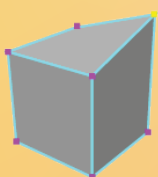

Sedi Aidam

For our midterm we created a personalized portfolio website to host both out class work and other art projects. The site was designed given the constraint that it had to be functional on an ipad sized screen.

### Landing Page

I chose to use simple line drawings of hands and shapes as a decorative element to give life to the dark background of the site. The icons are representative of specific interface elements of the programs I use to create the corresponding digital art works while the "about" icon is a fun image of me.

## Design Projects

### Assignment 1

Affordances in Handheld Devices

### Assignment 2

Signs and Signifiers in Mastheads

### Assignment 3

Redesigning the Pull Tab

### Assignment 4

Nonsense App Prototype

### Assignment 5

Portfolio Design

### Assignment 6

Responsive Web Design

### Assignment 7

Hovers and Animation

## Adobe XD Prototype

<https://xd.adobe.com/view/079c6230-7306-49dc-9bdc-2e56fc4f0261-52cf/>

When making the prototype I originally had the idea to have the icons be 3D elements that were freeform and “floating” around the page, but otherwise very simple in terms of interaction and design. This aspect was partially retained in the final version as the boxes holding each of the icons have seemingly “random” placements. The specific project pages were initially designed as if the information would be directly displayed, that changed in the final output as the icons now served as links to pdfs.

## Design Projects Page

For this page I turned the decorative element of the hands into icons. With the numbers on the fingers (in ASL) corresponding to the assignment numbers. I also have a menu bar at the top that connects to the other pages on the site with the “back” icon being represented with the pointing hand.

## Page Title

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Nulla suscipit sagittis magna dictum pharetra. Ut id gravida dui, quis luctus sem. Vestibulum ac neque vulputate, efficitur tortor quis dictum dolor.

### Original Concept

I started this project wanting to show my versatility by having icons that combine both 2D and 3D elements representing the breadth of my work. I quickly made this 3D model in maya to represent a home icon. However I wasn't very attached to this idea. I ended up making a big pivot into another direction as the final output shows.
